

*The Spiritual Significance Of Music*

# ART OF INFINITY

**THORSTEN RENTSCH**

Music can be emotionally moving. But how can vibrating air make you want to dance, bring you into a trance, and make you happy or sad? Music can give you all kinds of emotions. It can make you think and reflect, and at the same time it can tell you a story, an idea, or can even awake a spiritual feeling. Therefore, music must be the universal language of emotions, messages, and spiritual feelings. As a musician and producer, I like to put a lot of emotion into my music, otherwise the listener would not be able to feel any emotion while he or she is listening to the music. The more we put into our music, the greater chance the listener will receive and develop it into their own emotion. So the main task of Art Of Infinity's music is to try and take you out of time, out of your daily business life, and on a trip of emotions, reflections, and spirituality. Our music gives you a good platform to think about the big spiritual questions in life. For example, where do we come from? Where do we live? Where should we go? Or how little we are compared to the greatness of the galaxies, among many other questions that may come to mind. We sure would like to give you a break and motivate you to enter other dimensions of the mind.
